

REQUEST FOR PROPOSAL & STATEMENT OF WORK

NLP Document Intelligence Platform — LegalEagle LLP

Client: LegalEagle LLP | **Vendor:** TextIQ Systems | **Budget:** \$380,000 | **Duration:** 7 months | **Start:** 2026-10-01

1. Project Overview & Goals

LegalEagle LLP requires an NLP-powered document intelligence platform for automated contract review, clause extraction, risk flagging, and semantic search across 500,000 legal documents. The platform must handle privileged attorney-client communications with strict data isolation.

Goals: (1) Clause extraction F1 ≥ 0.91 on validation set. (2) Risk flag precision ≥ 0.88 to minimise false alarms. (3) Semantic search returns relevant results in top-3 for 90% of queries. (4) All models explainable to non-technical partners.

2. Scope of Work & MVP

MVP (Month 1–3): Contract ingestion pipeline, clause extraction for 10 core clause types (liability cap, termination, indemnity, etc.), and basic search interface. MVP complete when extraction F1 ≥ 0.85 on 100 sample contracts reviewed by partner attorneys.

Out of Scope: Court document filing automation; multi-language support beyond English; litigation prediction.

3. Work Breakdown & Timelines

ID	Work Item	Timeline	Entry Criteria	Definition of Done / Exit Criteria
WI-001	Document Ingestion & OCR Pipeline	Month 1–2	Document samples received; storage architecture approved	10k documents ingested <8h; OCR accuracy >98% on scanned PDFs
WI-002	Clause Extraction Models	Month 2–4	WI-001 done; annotation guidelines finalised	F1 ≥ 0.91 on 500 sample contracts; 15 clause types identified
WI-003	Risk Flagging Engine	Month 3–5	WI-002 done; risk taxonomy approved	Precision ≥ 0.88; risk explanations in plain English; risk dashboard
WI-004	Semantic Search & Q&A	Month 4–6	WI-001 done; search taxonomy defined	Top3 relevance for 90% of test queries; cross-document synthesis
WI-005	Fine-Tuned LLM for Legal Drafting Assist	Month 5–7	WI-002 done; base model selected	Draft suggestions accepted by attorneys ≥ 70% of time; hallucination rate < 5%

4. Legal & Contractual Obligations

4.1 Late Delivery Penalty: Fixed \$15,000 per week of delay per milestone. Attorney-client privilege breach caused by Vendor's system failure results in immediate contract termination and indemnification of all Client losses without cap.

4.2 Subcontracting: No subcontracting for core ML development or any personnel with access to privileged documents. Data annotation may be subcontracted to pre-approved vendors operating in ISO 27001-certified facilities with legal privilege protocols.

4.3 Indemnity: Vendor indemnifies Client for any privilege waiver or confidentiality breach attributable to Vendor's platform or personnel. Vendor indemnifies Client for IP infringement claims arising from use of third-party training data. No liability cap for privilege-related breaches.

4.4 Intellectual Property: Client owns all fine-tuned models, extracted clause libraries, and risk taxonomies. Vendor retains base NLP framework; grants Client perpetual licence. Vendor may not use LegalEagle documents to train models

for any other client. Client's legal strategies and deal terms are Confidential Information with perpetual protection.

4.5 Insurance: Professional Indemnity $\geq$ \$10M (legal tech specific); Cyber Liability $\geq$ \$5M; Legal Malpractice Technology Errors & Omissions $\geq$ \$5M.

5. Security Requirements

5.1 SAST: All releases undergo SAST (Semgrep + Snyk) and secret scanning (Gitleaks). No secrets in code repositories. All dependencies pinned and SBOM generated per release. Legal document processing code reviewed by security team.

5.2 VAPT (Pre-Deployment): Full VAPT before each major release (Month 3 MVP, Month 7 GA) by an independent firm with legal-tech experience. Scope: web application, API layer, document storage, and access controls. Privilege-bypass test cases mandatory.

5.3 Data Isolation: Each law firm client's documents stored in separate encrypted namespaces. Cross-client data access is a critical security defect requiring immediate incident response. Annual ISO 27001 audit of document handling processes.

6. Project Closure

Closure: (1) Clause extraction $F1 \geq 0.91$ in production. (2) Risk flag precision ≥ 0.88 on 500 live contracts. (3) Both VAPT reports completed with criticals resolved. (4) SAST scan clean on final release. (5) All fine-tuned model weights delivered to Client. (6) Model cards and data lineage documentation complete. (7) 45-day hypercare with 24/7 privilege breach incident response.
